RING GEAR / FACE GRINDING

Your part defines the next conversation.

Bring your drawing, material and production context.
C&B can help frame the application review.

Two opposing faces. One application brief.

Double-disc grinding removes material from opposing part surfaces.

Published C&B ring gear example

Representative equipment. Final system selection requires application review.

Start with four things.

01	**Material**	Grade, hardness and condition.
02	**Geometry**	Drawing, dimensions and faces to finish.
03	**Finished part**	Size, surface and geometric requirements.
04	**Production**	Volume, part mix, timing and handling needs.
